

SUMIMARK IV 300 DPI Cut Peel Offset

If the Sumimark IV 300dpi is cutting into the printing, the Cut Peel Offset setting may be off and need resetting.

Please follow the steps below to change this setting in the physical printer.

-On the printer press **PAUSE**

-Press **FEED** and **PAUSE** at the same time to bring up printer menu. It should say **PRINT MODE** on the front display if done correctly.

-Hold down the **FEED** button while pressing the **PAUSE** button to cycle menu forward or **CANCEL** to cycle back through the menu.

-Cycle to and stop on **Cut Peel Offset**

-Press **CANCEL** by itself once / **CUT PEEL OFFSET** on the display will flash

-Hold down the **FEED** button then press **PAUSE** to increase the value to **+012**. Pressing **CANCEL** will decrease the value. The setting should be between **+012** to **+014** only.

-Press **CANCEL** to lock in selection / **CUT PEEL OFFSET** will stop flashing

-Press **PAUSE** 2x which will take you back to the **READY** screen
